TITLE: Method and apparatus for creating and assigning unique identifiers for network entities and database items in a networked computer system

Detailed Description Text (7):

An example of a network-wide service is that which is provided by the PowerShare Catalog Server application, available from Apple Computer, Inc. and herein referred to as "PCS". PowerShare is a trademark of Apple Computer, Inc. PCS is a general-purpose, network system-wide, catalog service which maintains a shared repository for collaborative information such as employee databases and corporate directories. It can also be used to store common user profile information and information needed to manage workflow processes and to communicate important information between software applications.

TITLE: Consolidated component catalog

Abstract Text (1):

This invention is related to electronic product description transfer between a trading partner that designs a product and a trading partner that manufactures the product and more particularly to the organization and use of a catalog of component information used in the generation of process documents and programs to adapt an assembly process to assemble the product as specified in the electronic product description. In the present invention, a consolidated component catalog provides the information for a component used in the assembly of a product in two sections: an assembly process independent section and an assembly process dependent section. The assembly process independent information is used to correct and validate the product description information. The assembly process dependent information is used to generate the programs and documents to adapt an assembly process to assemble the product described in the product description. A component is identified using a part number from a part number system in the product description and the consolidated component catalog. Another product description using the same component may identify the component with a second part number from a second part number system. The consolidated component catalog relates the first part number and second part number to the component so that redundant component information is not created.

Brief Summary Text (4):

This invention is related to electronic product description transfer between a trading partner that designs a product and a trading partner that manufactures the product and more particularly to the organization and use of a catalog of component information used in the generation of process documents and programs to adapt an assembly process to assemble the product as specified in the electronic product description.
